BS Computer Science, UET Peshawar • Student ID: 24PWBCS1380

## SUMMARY

4th-semester Computer Science student at UET Peshawar with hands-on experience across Machine Learning, Data Science, and full-stack software engineering (MERN). Certified in Modern AI by Cisco. Builds applied, socially-focused AI and web products end-to-end — from backend architecture and APIs to model integration — and is pursuing deeper research and mentorship en route to a Master's in AI.

## TECHNICAL SKILLS

- **AI & Machine Learning:** Naive Bayes (Gaussian, Multinomial, Bernoulli), KNN, Linear Regression, K-Means Clustering, BFS/DFS/Greedy/A* search, EDA & feature engineering, multilingual NLP (Urdu/Pashto), LLM prompt engineering
- **Software Engineering & Web Development:** React, Redux, Node.js, Express.js, MongoDB (Mongoose), Socket.io, RESTful API design (CRUD, validation, pagination, middleware, error handling), HTML/CSS, Next.js
- **Languages:** Python, JavaScript, Java, C, C++
- **Data & Backend:** MySQL, MongoDB, FastAPI, Redis, JSON-based data persistence, Git/GitHub, Docker
- **Tools:** NumPy, Pandas, Scikit-learn, Matplotlib, Seaborn, Jupyter Notebook

## PROJECTS

**FloodCommand — Autonomous Disaster Response System** | *AtomCamp National AI Hackathon, 2025*

- Built a 5-agent AI pipeline (Claude Sonnet) that processes Urdu/Pashto WhatsApp distress messages and dispatches NGO rescue teams within 90 seconds
- Contributed to agent prompt engineering and multilingual intake testing; deployed live on Vercel
- Stack: FastAPI, Redis, Next.js, Twilio, Leaflet.js

**Synapse — Real-Time Communication Platform** | *Web Technologies Course Project*

- Led backend development for a Discord-inspired, real-time messaging platform (MERN stack) as part of a 4-person team under a tight deadline
- Designed REST API endpoints (CRUD, validation, error handling) and real-time messaging with Socket.io
- Stack: React, Redux, Node.js, Express.js, MongoDB (Mongoose), Socket.io

**MediGuide — AI Symptom-Triage Chatbot** | *Independent Project*

- Built a bilingual (English/Urdu) symptom-triage chatbot using Python and the Gemini API to improve healthcare accessibility in Pakistan
- Managed the full development lifecycle: environment setup, debugging, and GitHub deployment prep

**AudiWave — Audio-to-Sign-Language Chrome Extension** | *Independent Project*

- Directed architecture and a phased development roadmap for a real-time Manifest V3 extension translating audio into ASL via an NLP-to-gloss pipeline
- Designed a 3D avatar system with sentiment-driven facial expressions supporting multiple sign-language dialects

## EDUCATION

**BS Computer Science** | *University of Engineering & Technology (UET) Peshawar* Oct 2024 – Oct 2028

- Relevant Courses: Introduction to Data Science, Applied Linear Algebra, Artificial Intelligence Lab, Web Technologies

**Intermediate (Pre-Medical)** | *Ghulam Ishaq Khan Institute (GIKI)*

## CERTIFICATIONS & ACTIVITIES

- Introduction to Modern AI — Cisco Networking Academy (Mar 2026)
- Co-Chair, Communications — ASME Student Chapter, UET Peshawar
- Participant — National AI Hackathon by AtomCamp at IMSciences (2025)
